

Thermo Scientific 42iQ

NO-NO₂-NO_x Analyzer—chemiluminescent

The Thermo Scientific™ 42iQ NO-NO₂-NO_x Analyzer utilizes chemiluminescence technology to measure the amount of nitrogen oxides in the air from sub-ppb levels up to 100ppm.

This analyzer is a single chamber, single photomultiplier tube design that cycles between the NO and NO_x modes.

The 42iQ Analyzer has independent outputs for NO, NO₂ and NO_x that can be calibrated separately. If required, the instrument can be operated continuously in either the NO or NO_x modes allowing for response times of less than five seconds. Dual range, auto range, temperature correction and pressure correction are standard features.
