

Are **metal wire** contaminants in your products reaching customers?

With new Thermo Scientific™ Multiscan metal detection technology, detect metal wires in your product in ANY orientation

Tired of finding wires from your filters and strainers in your product?

With the competition's metal detector technology, a wire contaminant must have a specific orientation to be detected when passing through your metal detector. Otherwise, the wire remains in your product.

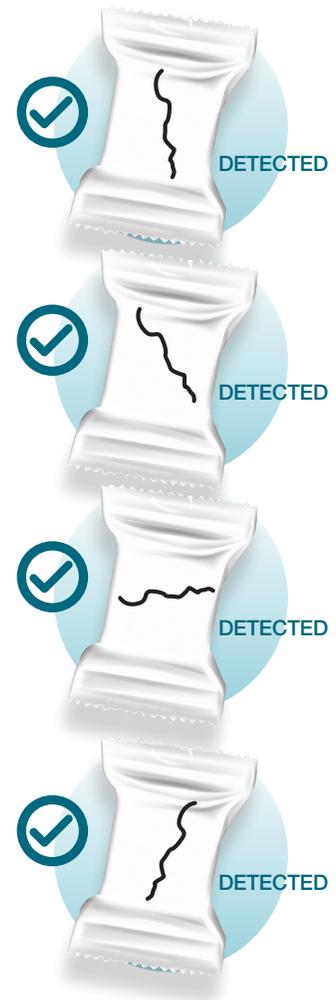

The new 5-frequency Thermo Scientific Sentinel Multiscan metal detector will improve the probability of detection of that same wire in any orientation.

Sound too good to be true?

Competitive Technology

Thermo Scientific™ Sentinel™ Multiscan Metal Detector
