

# Case Study: Securing your shipping and receiving dock

Feature product: Thermo Scientific RadHalo FM  
spectroscopic area monitor

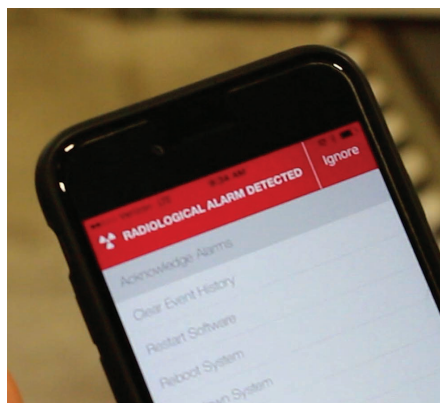

Ensuring the safety of your staff and facility

Millions of packages move around the world every day carrying radioactive sources. Some packages are well marked, others are not.

**The Thermo Scientific™ RadHalo™ installed at your loading dock will ensure you are fully alerted to potentially harmful sources of radiation arriving at your facility**

- Permanently installed in receiving dock, providing 24-7 radiation detection and identification
- Capable of identifying very small sources of radiation
- Audible and visual alarms triggered when a source is discovered
- Receive alerts at your workstation or on your mobile device with the RadHalo app

*Radioactive materials are used in a wide range of applications from research and medical procedures to manufacturing processes, building construction and more.*

The RadHalo will automatically analyze the radioactive source and notify you what it is, allowing you to respond accordingly.

For more information on the RadHalo, visit us online at [thermofisher.com/radhalo](http://thermofisher.com/radhalo)
