

Laboratory software

Connect Platform, Team edition

Making lab life easier

In a world where we realize incredible scientific advances every day, why do scientists struggle with the simple things? Reserving time and controlling access to instruments, collecting, analyzing, and sharing data, should be easy. Thermo Fisher Connect Platform, Team edition, is here to bring simplicity through a connected lab experience.

Control access to instruments and equipment

In the Connect Team lab, instrument connectivity is made easier, enabling scientists to connect their instruments without the need for additional IT support:

Cloud-enabled instruments from Thermo Fisher Scientific	Instruments from other vendors	Equipment without built-in connectivity
Connect Platform-native instruments enable remote experiment monitoring and automated data capture.	Thermo Fisher Connect Transfer software automatically uploads your data into your team's Connect Platform storage.	Attach one of our connectivity devices to compatible freezers, refrigerators and incubators, for monitoring and alerts.

Easy, vendor-agnostic instrument and equipment connectivity

An enhanced reservation calendar enables users to view availability and schedule time on instruments. Managers can make and adjust reservations as needed. Reservation Server can be installed on instrument PCs to gate access to users based on reservations.

Instrument connectivity

Data analysis

Data access and security

Secure data access and management

Teams get 1TB of Connect Platform cloud storage, with upgrades available. Your team's accounts and data are all owned and managed by your organization, and data is scanned for viruses for extra security. Data is retained from user accounts that are deactivated, and remains accessible to your admins so you never lose control of your organization's data, and avoid loss of Intellectual Property. Federated identity & single sign-on provide simplified login for your users and immediate access control by your IT organization. The system makes it easy to share data with other users, while managing access and file permissions for complete data security.

Powerful analysis tools

With Connect Platform, Team edition, scientists can connect instruments and equipment to a central platform for data storage and scientific analysis, with an array of apps covering a range of disciplines to help derive real insights from your data. Primary and secondary Thermo Fisher Connect Platform analysis applications include tools to support real-time qPCR, next-generation or Sanger CE sequencing, mass spectrometry, chromatography, and more. Connect Platform apps can combine hundreds of experiments into one project, so you can quickly analyze data sets. The Connect Platform analytical data viewer works with many data types, enabling analysis from one platform—without the need for the originating software or instrument.

Connect Platform, Team edition, provides secure, cloud-based storage connected to your instruments, and enables access to more of your data, from anywhere. Scientific analysis apps and peer collaboration tools simplify data analysis and sharing. Asset management tools allow you to remotely schedule time on your lab's instruments and monitor runs, while telemetry data and remote troubleshooting provide reassurance and optimize uptime. The Connect Platform enables you to focus on what matters most – the science.
